

## Millennium Blue Tray Liners

Lightweight easy to use viscose base

- This 40g/m<sup>2</sup> viscose based dry laid liner is ideal for smaller trays and where economy is important. The absorbent qualities assist in the spread of condensate during autoclaving and help achieve dry packs during processing. Being very light in weight it will normally be used inside the tray as illustrated.
- Conforms extremely well to tray contours - easy to handle

CLINIPAK

### Features

- Lightweight and very easy to use
- 100% Viscose based dry laid product
- A similar absorbency to super soft soaker sheets but made of a lighter material
- Matt blue finish to minimise glare
- Ideal for medical use
- Please Note: The Clinipak millennium blue tray liners are not suitable for use in a sterrad hydrogen peroxide steriliser. This product is a single-use item.
